

Ski carpet

Basic specifications:

- Maximum slope gradient 25%
- Maximum transport length 100 m
- Conveyor belt width 600 mm
- Section length 3 m
- Transport speed continuously adjustable 0,2 - 0,8 m/s
- Quick installation
- Safety (safety components in class 4)
- Easy maintenance
- Total length of ski carpet is possible to assemble in range of sections size (3m) according to customer requirements
- Installation directly on slope (there is not necessary to create a concrete base)

Simply and easily

EPO

Ski carpet *Simply and easily*

Ski carpet serves for skiers transportation in particular. Thanks to its undemanding on skier's skills and its safety, the ski carpet is very suitable for transportation even the smallest children. Modular conveyor belt with non-skid segments enables to overcome relatively big vertical distance. Simply framework enables quick disassembling and installation in other place. Ski carpet is also very suitable for various logistical solutions in ski areas, such as (for example) transportation device to chair lifts, to ski lifts or to parking place. Usage of ski carpet is not designated only on winter months, but it is possible to operate it the whole year for various activities.
